- Enterprise Email & Messaging Solutions
- Server Installation , Migration and Support
- Facility Management Service (FMS)
- Annual Maintenance Contract (AMC)
- Network Infrastructure, Network Analysis Services
- Microsoft Windows Server 2008 support

How we do it ?

Understand the Client's Need

Clients are often left feeling that they are just one of many that the vendor has to answer to. Consultants are always on the rush, never taking the time to understand the true requirements of the client. We want to know the client's business so we can truly provide a solution that not only will suffice for today's needs but be a vehicle of growth. **We never subscribe to the "one size fits all" mentality**, each solution is tailored for their unique business, financial and IT environment. It is also important to understand that while the latest technology has its benefits it is not a pill for all occasions.

Communication with the client

Communication is critical to any successful implementation of solutions. Communication not just to inform the client of our proposal and progress, but also to understand the expectation of the client. Clear and effective communication is crucial to avoid conflicts or issues that can jeopardize any technology implementation. Clear and effective communication is important for clients to understand the impact a solution can have on their business. Clear and effective communication are not just empty words, it is an expectation that our clients have come to rely on us.

Efficient and Focused Implementation

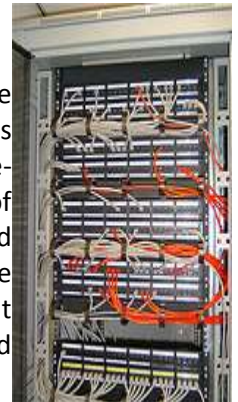

Too often solution providers are side tracked with various clients at a given time, this is a recipe for implementation failure. We take pride in having a focused approach. A focused implementation ensures the successful completion of project milestones. A focused implementation allows us to be efficient, this efficiency translates into fewer disturbances to the client's business, and it also translates into better use of their investments and commitments. It is with a focused approach resulting in an efficient implementation that we will fulfill the customer's expectations and goals.

LAN/WAN Design & Implementation

MICRA INFOTECH provides consulting, design and planning services to help develop business models, design networks and take over complete business processes for our Clients. We provide architecture, design, implementation planning, rapid integration, project management, product planning and financial modeling for your network infrastructure. We help you securely integrate and support data, voice and video networks, design intelligent network infrastructures, leverage new technologies and quickly seize opportunity in order to connect, run and grow your business.

Structured Cabling

We offer a strategic and consultative approach to meet our client's communication challenges. As a value-added reseller and integrator of structured cabling systems and specializing in data and voice applications, our goal is to ensure that the optimum solution is developed, and operational, when you need it.

We take great pride in providing structured cabling solutions that come with extensive warranties and are capable of outperforming any other in the marketplace. CAT 6 copper connectivity solutions for voice, video, data, and building automation. All copper cabling solutions are installed, tested, and certified to meet or exceed the specifications.

UTM | Firewall | Email | Web Security

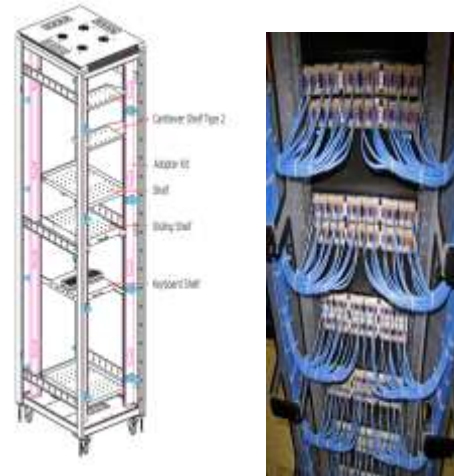

Today's businesses need robust yet simple e-mail, web and network threat protection that takes minutes, not hours, per week to manage. Available as a hardened appliance (Firewall) or as Windows software, Security provides powerful protection in one simple solution that dramatically reduces the time and expense involved in e-mail and web security.

CCTV Security and Surveillance System

Server Rack and Structured Cabling Solutions

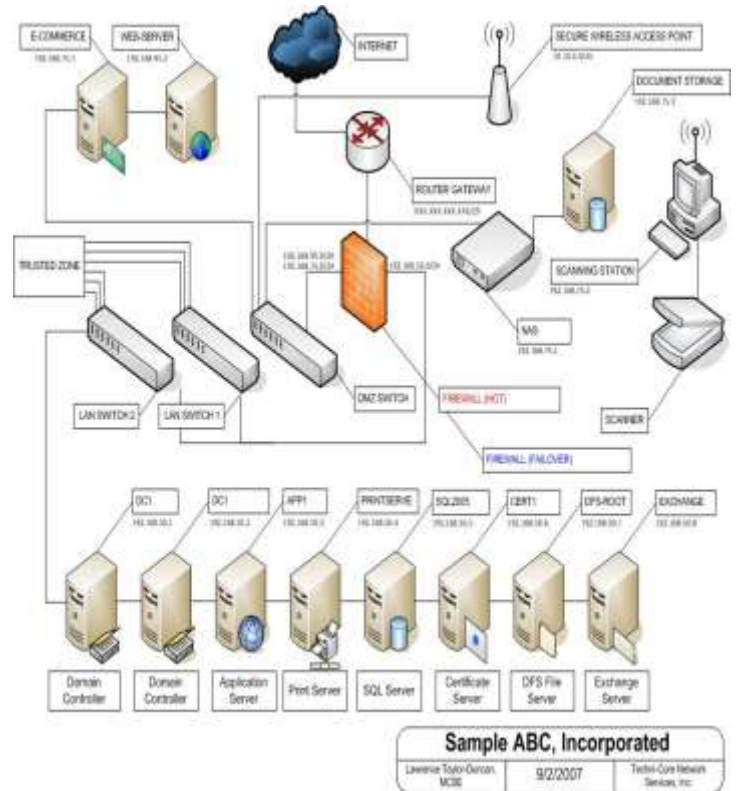

Biometric Access Control & Time Attendance

Standalone fingerprint T&A System, IN and OUT status, also low price with good performance, designed especially in the purpose of popularizing the fingerprint products. It could store 3,000 fingerprint templates and 1,00,000 transaction records. It will bring you much profit because of its low price.

- Dimension(WxHxD): 21.5 X 14.5 X 3.5 cm
- User Capacity:3,000
- Transaction Storage : 1,00,000
- Communications: RS232 ,RS485, TCP/IP ,USB
- Processor: 32 Bit
- Identification time : < =2S
- FAR: <=0.0001%
- FRR: <=1% Operating
- Power Supply: 12V DC ,400mA
- Algorithm Version: Finger v9.0/10.0
- Display: 3 Inch LCD TFT
- Software: Time & Attendance.

Network Architecture, designing and support

Server Virtualization & Consolidation Solution

No budget for new servers?

Virtualize and free up resources

Improve availability and IT infrastructure efficiency.
